# Case Study: Building a Hosted Call Center

Presented by

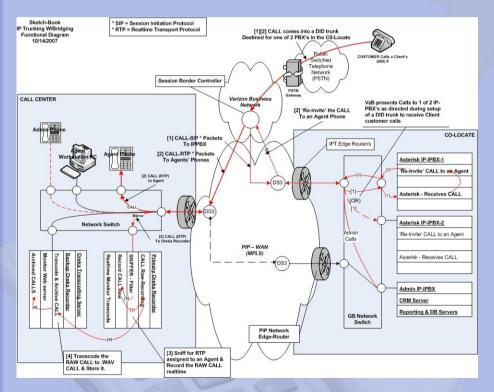

Matt Florell President - VICIDIAL Group

> Astricon \* Phoenix September 25, 2008

### Intermedi@ Marketing Solutions

- Wanted to move to a centralized call center solution at a carrier co-location facility
- Wanted to avoid vendor-lock-in
- Wanted to save money if possible
- Wanted to use Open Source to allow for customization of functionality and integration with existing legacy systems
- Wanted a centralized system that could allow for work-at-home agents

### **Network Architecture**

- Multi-rack cage at Verizon co-location facility
- Point-to-point data connections to call center facilities
- Verizon SIP Trunks for Inbound call center
- Verizon voice DS3 into individual T1s for the outbound call center

#### Astricon 2008

### Inbound Call Center

- Balanced Verizon IP Trunking across two DS3 data circuits
- Multiple very-high-end servers to handle Asterisk Queues
- QueueMetrics for statistics and ACD reporting
- OrecX for recording and monitoring of agents
- Lokad for inbound call volume analysis
- Capacity of over 800 concurrent calls

### Outbound Call Center

- VICIDIAL call center suite
- QueueMetrics for integrated statistics and reports
- Six Dialing servers, one web server and one database server
- Capacity of 570 concurrent outbound calls and 300 agents

### Asterisk

- Asterisk Queues handling up to 500 inbound phone calls per server
- Modified Asterisk code for extra inbound queues features and streamlining of the Asterisk code
- Native SIP bridging used wherever possible to reduce load on Asterisk

### QueueMetrics

2007-06-22	1	0.1%	1	0:20	0:20	0:20	-
2007-06-23	750	99.9%		0.13	0:10	0:20	

#### Unanswered call wait time per day

#### Sales per day

- Chat client for firefox sidebar
- Client used dedicated MySQL server for database and a dedicated Apachetomcat web server

OrecX

- Network sniffing audio recording and monitoring application
- Base recording package is Open Source, user agent is paid-for software
- For T1/E1 recording, uses Sangoma RTP-tap to get audio streams from TDM to pseudo-VOIP
- Separate servers for OrecX collection/livemonitoring and for archive of recordings

- Open-Source Call Center software, written in Perl and PHP and using MySQL for back-end
- Agent and Admin are web-based interfaces
- 50 to 100 agents per server

 Desktop application

 Call forecasting based upon queue\_log database table records generated by Asterisk or VICIDIAL

 Erlang C staff optimization levels

### **Custom Integration**

- Asterisk and QueueMetrics reporting changed to correspond to business rules
- VICIDIAL call handling and agent call status are logged and able to be controlled to some extent by legacy applications through the use of an API

### Load Balancing

- Inbound SIP trunk calls are balanced across the two DS3 connections, which also have fail-over
- As agents log into VICIDIAL, they are logged into the server with the least number of agents on it
- Web load balancing for the VICIDIAL agent interface is simple and non-session-specific

### Fail-over Procedures

- Every agent SIP phone is registered to every Asterisk server
- If a VICIDIAL server fails, then agents can log back in within seconds using one of the other VICIDIAL servers
- If one of the DS3 data connection fails, then all calls will be directed to the other DS3 data connection

### Future Projects

- Further integration with internal legacy systems
- Agent scheduling optimization with inbound ACD call volume forecasting
- Further roll-out of at-home agents

Astricon 2008

## Thank you!
